The MAILING DATE of this communication appears on the cover sheet with the correspondence address Period for Reply					
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.  - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.  - If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.  - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.  - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).  Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).					
Status					
1) Responsive to communication(s) filed on 24 De	ecember 2003.				
2a)⊠ This action is <b>FINAL</b> . 2b)☐ This	action is non-final.				
3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under <i>Ex parte Quayle</i> , 1935 C.D. 11, 453 O.G. 213.					
Disposition of Claims					
4) ☐ Claim(s) 1-12 is/are pending in the application. 4a) Of the above claim(s) is/are withdraw 5) ☐ Claim(s) is/are allowed. 6) ☐ Claim(s) 1-12 is/are rejected. 7) ☐ Claim(s) is/are objected to. 8) ☐ Claim(s) are subject to restriction and/or					
Application Papers					
9)☐ The specification is objected to by the Examiner	:				
10)⊠ The drawing(s) filed on <u>01-14-</u> is/are: a)□ accepted or b)□ objected to by the Examiner.					
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).					
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).  11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.					
Priority under 35 U.S.C. § 119

#### **DETAILED ACTION**

This action is responsive to the amendment and response filed, 12-24-2004, which has been entered. Claims 1-12 are currently pending.

### **Drawings**

1. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, "the tool interface means of the nut faces outside the crank assembly" as in claim 11, respectively, must be shown or the feature(s) canceled from the claim(s). No new matter should be entered. It should be noted that the crank assembly includes the crank arm and the tool interface means does face the outside of the crank but inside the crank.

A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

## Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claim 1-2, 4-5, 7-8, 10 and 12 is rejected under 35 U.S.C. 103(a) as being unpatentable over WO(9308071) in view of Kirrish(4,310,273). WO(9308071) discloses a fastener assembly (107,109) for attaching a chaining to a bicycle, the device

Application/Control Number: 10/077,665

Art Unit: 3682

comprising a nut (107) comprising an internally threaded cylinder, an external flange (not labeled) on one end and a hole in the cylinder; a bolt (109) threadably engages the nut and comprising a tool interface (not labeled) formed inside the shaft. WO(9308071) dose not disclose a tool interface means formed inside the cylinder. Kirrish discloses a fastener system (20) comprising a nut (34) having a threaded cylinder (44) and a tool interface means (58) formed in the cylinder in order to facilitate proper alignment between the bolt and nut thus minimizing cross-threading before tighten the fastening device and to allow quick and easy removal without the bolt and nut turning in unison. Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to modify the fastening device of WO(9308071) so that the nut has a tool interface in the threaded cylinder in view of Kirrish in order to facilitate proper alignment between the bolt and nut thus minimizing cross-threading before tighten the fastening device and to allow quick release and by fastening/turning the bolt and nut simultaneously and to allow quick and easy removal without the bolt and nut turning in unison.

In claim 2, it is apparent that the tool interface (56, 58) are of the same size and shape.

In claim 10, not the tool interface of the nut faces the out side of the crank handle

4. Claims 3, 6 and 9 rejected under 35 U.S.C. 103(a) as being unpatentable over WO(9308071) in view of Kirrish. WO(9308071) and Kirrish do disclose that the tool interface means are different is size. It would have been obvious to one of ordinary skill in the art at the time of the invention to modify the fastening device of WO(9308071) in

Application/Control Number: 10/077,665

Art Unit: 3682

view of Kirrish so that the tool interfaces are of different size, since such a modification would have been a matter of design choice, and such a modification would involve a mere change in weight and cost of manufacturing. A change in size is generally recognized as being within the level of ordinary skill in the art. In Rose, 105 USPQ 237 (CCPA 1955)

5. Claims 11 are rejected under 35 U.S.C. 103(a) as being unpatentable over WO(9308071) in view of Kirrish. WO(9308071) in view of Kirrish do not disclose the nut toll inter face means faces the outside of the crank handle. It would have been obvious to one of ordinary skill in the art at the time of the invention to modify the fastening device of WO(9308071) so that the too interface means faces the outside of the crank handle, since this involves rearranging the nut and bolt to face a different direction and it has been held that rearranging parts of an invention involves only routine skill in the art. In re Japikse, 86 USPQ 70.

#### Response to Arguments

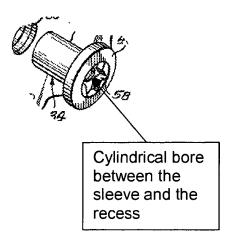

6. Applicant's arguments filed 12-24-2004 have been fully considered but they are not persuasive. Applicant contended that the bolt of Kirrish has a head with a tool interface means and the tool interface does not form part of the cylinder of the bolt. In response, in figure 1, it can be seen that the nut (34) has a cylindrical hole passing through the sleeve (50) and the head (48). The cylindrical hole has three sections; one section is in the sleeve, another is in the tool recess (58) of the head and a smaller section joining the hole in the sleeve and the tool recess. In addition, Kirrish clearly discloses that the nut comprise a head portion and a sleeve portion and a bore 52

Page 5

Application/Control Number: 10/077,665

Art Unit: 3682

extends through the sleeve, which means that the hole extends beyond the sleeve. See attached drawing section below.

Therefore, the rejection of WO(9308071) in view of Kirrish is proper. In addition Kirrish clear shows the nut as claimed.

7. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
